

GEE- PMT MODULE 4

TEACHING-LEARNING PROCESS

Week 5-6

"You're a teacher. You know how to help people learn hard stuff. Do that."

-Professor Rob Coe

I. Objectives: After working on this module, you will be able to:

1. Identify and explain the elements of teaching-learning process
2. Demonstrate understanding of diversity of learners as inputs to planning and designing learning opportunities
3. Explain the significance of the teacher having several roles in the classroom
4. Reason out why teaching-learning process cannot be performed if any of its elements is missing

II. Introduction

This module focuses on the factors or elements of teaching-learning process namely the learner, the teacher and the learning environment. The learner is the core of the teaching-learning process. They are considered the primary subject or the main reason why the process takes place. In order to understand the learners, there is a need to delve on several main issues such as the factors affecting the cognitive development of children, learning styles and preferences. Teachers are considered as the prime mover of the educational process. They are the ones who facilitate the whole process of learning in the classroom. They assume varied roles and have professional attributes and good personal qualities. Learning environment is a venue for social interaction that include ways of doing things, solving problems, and acquiring information. One of the most important tasks of a teacher is to create an effective learning environment. If the classroom is an effective learning environment, learners will

achieve more, acquire more positive attitudes, and be equipped with basic solid skills that they can apply throughout their lives.

III. Discussion

Teaching and learning involves the process of transferring knowledge from the one who is giving to the one who is receiving. Teaching process cannot be performed if there is one element that is missing among the three of the teaching and learning elements. These elements are necessary to be able to make teaching and learning possible. Without any of these elements, there could be no real teaching or learning process that will exist. It is so important that these elements are present in the process of teaching, considering that all of them play an important role in the system. It is being considered that learning occur when there is established relationship among these three elements. The teaching as well as the learning activity depends upon how these elements works together. <http://varron.expertscolumn.com/article/elements-teaching-and-learning-process>

Elements of Teaching –Learning Process

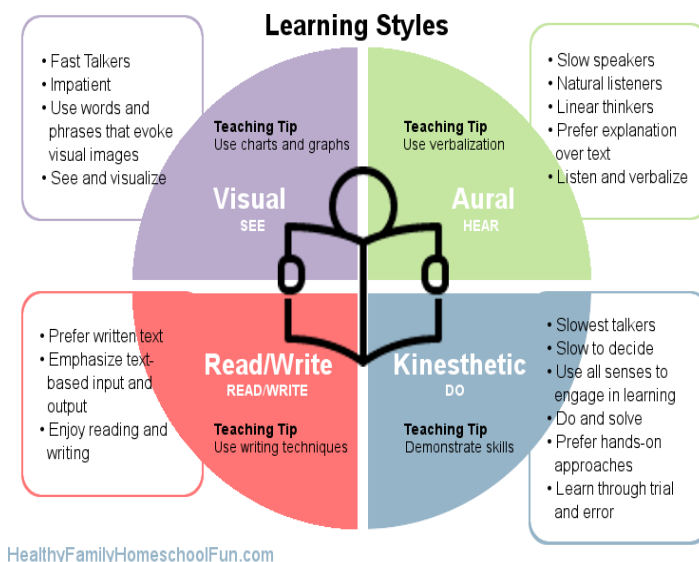

1. The Learner

- the key participant in the learning process.
 - the subject of the schooling process. Without him, the educational system will not exist.
 - The core of the teaching-learning process
 - It is from him that resolves all activities related to classroom activities
- ❖ To make teaching effective and learning productive, the teacher must know the nature of the child to be motivated, directed, guided, and evaluated.
- To understand the child, the teacher must know:
1. the child as a biological organism with needs, abilities, and goals
 2. the social and psychological environment
 3. the cultural forces of which he is a part

Task #1. Read carefully the statement below. How do you react to this?

And finally as a learning preferences side note and tip to beginning teachers on effectively responding to students' learning needs - no matter how much students' ipod earphones in ears may appear rude to you, just let it go, and go with it - because listening to music whilst they work is actually just another learning preference that can enhance 21st century students' learning. (honest!).

Learning Styles and Preferences - The classroom or environmental conditions that students prefer to learn

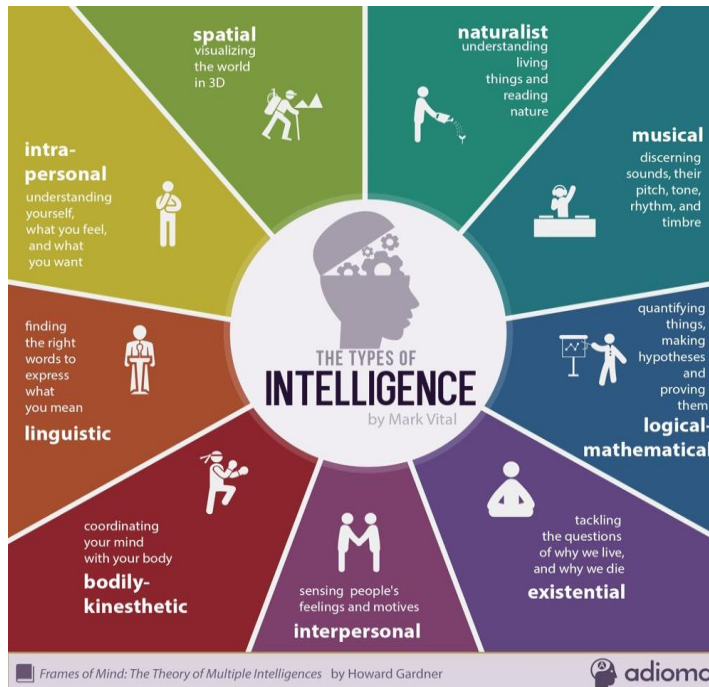

Your mastery of the different learning styles will help you to think and plan of the most appropriate strategies in class to make your lesson interesting and engaging. Aside from understanding the learning types of your learners you also must understand the theory of multiple intelligences which is directly related to addressing learning styles. The theory on multiple intelligences identifies linguistic, bodily-kinesthetic, interpersonal, existential, logical-mathematical, musical, naturalist, spatial, and intrapersonal intelligence as related concepts to the learning styles of your diverse learners.

Task 2 : Can you identify what learning style you are best at?

Answer: _____

MULTIPLE INTELLIGENCES

The theory of multiple intelligences was developed in 1983 by Dr. Howard Gardner, professor of education at Harvard University.

https://www.google.com.ph/search?q=example+of+9+multiple+intelligences&dcr=0&source=lnms&tbn=isc&sa=X&ved=0ahUKEwjez5WN76PWAhVKppQKHWsyBJEQ_AUICigB&biw=1686&bih=836&dpr=1.13#img_r=c=qBHmNF1kV11FHM:

1. **Spatial Intelligence**— these learners think in images and are called “Picture Smart”
2. **Musical Intelligence** – these are the musicians and singers of our world called “Music Smart”
3. **Linguistic Intelligence** – having a way with words, these are called “Word Smart” (both in speech and writing)
4. **Bodily-kinesthetic Intelligence** – These learners have good body control like physical exercise and working with their hands. They use a lot of gestures while talking and are called “Body Smart”

5. Logical- mathematical intelligence – These learners excel at Science and Math and are called “Number Smart”
6. interpersonal Intelligence – These are people persons. They like to be around people and are called “People Smart”
7. intrapersonal Intelligence – Learners with intrapersonal intelligence are very introspective and independent. They like being alone and are called “Self-Smart”.
8. Natural Intelligence - observing, understanding, and organizing patterns in the natural environment. They are called “Nature Smart”.

Recognizing the diversity of learning styles allows for all students to contribute to the academic conversation in a way that supports individuation and differentiated instruction

IF YOU ARE ...		
A VISUAL LEARNER ✓ Draw Diagrams ✓ Create Graphs ✓ Draw a Comic Strip ✓ Make a Poster ✓ Make a Power Point ✓ Make a webcast or a video.	A MUSICAL / AUDITORY LEARNER ✓ Write a Song or Rap ✓ Create a Dance ✓ Write a Jingle ✓ Make a rhyme or poem ✓ Use an instrument to create / memorise ✓ Make a Mnemonic	A VERBAL LEARNER ✓ Teach to your group ✓ Write a set of instructions ✓ Create an advert or a video tutorial ✓ Make a rhyme or poem ✓ Make a journal / diary ✓ Re-tell in your own words
A VISUAL / KINAESTHETIC LEARNER ✓ Create a Game ✓ Create & do an Experiment ✓ Make & Build a Model ✓ Build a Representation ✓ Create a sport	LEARNING CHOICES We all learn in different ways. You probably already know the best way for you to discover, think, create and learn. Here are a few ideas of things YOU could do to improve your learning.	
A SOCIAL LEARNER ✓ Tell stories or poems ✓ Survey others ✓ Interview classmates ✓ Do Role Play ✓ Hold a Debate or a Discussion ✓ Teach a Cooperative / Team Game	A SOLITARY LEARNER ✓ Do In-Depth Research ✓ Keep a Journal or Diary ✓ Create Power Points ✓ Draw and Doodle ✓ Write a Book Review ✓ Create a Blog	A LOGICAL / MATHEMATICAL LEARNER ✓ Create a Code ✓ Make a Time Line ✓ Compare & Contrast Ideas ✓ Create an Outline ✓ Make a Map ✓ Show Patterns & Relationships ✓ Make a Mind Map
A COMBINATION LEARNER ✓ Mix and Match approaches from the other Learning Styles.		

<https://magistersapiens.wordpress.com/2-responding-effectively-to-students-learning-needs-in-your-classroom/>

REMEMBER THIS

1. There is no single/definite learning style. There is a mix of learning styles for everyone.
2. Some people have dominant style of learning with far less use of other styles.
3. Others may use different styles in different circumstances. There is no right combination.
4. Styles that are developed can still be further improved for learning enhancement.

Task 3: What is your learning style?

I am a _____. I learn best when _____.
Things like _____ help me in my learning process. As a _____ learner, I enjoy _____.

Factors affecting Cognitive Development of children

A. Biological Factors

1. Senses – sense organs receive stimuli from the environment. When sense organs are defective they collect defective stimuli and, as a result, wrong concepts are formed. Cognitive development will not be perfect.
2. Intelligence – the ability to learn about, learn from, understand and effectively interrelate with one's environment.
 - Intelligent children have better cognitive development.
 - Low intelligence quotient makes children unable to receive from the environment.
3. Heredity – cognitive development is influenced by the hereditary traits one gets from his parents.
4. Maturation – the process to cope and respond in an emotionally appropriate way.

- Maturation may not be necessarily realized along with aging or physical growth, but it is a part of growth and development. It is continuous, it does not stop when physical growth ends, it continues through adulthood.

B. Environmental Factors

1. Learning Opportunities – the more opportunities the learner gets, the better is the cognition
2. Economic Status – learners from better economic status get more opportunities and better training.
3. Play is also important in developing cognition
4. Various Types of stimuli – stimuli from the environment through his senses and perceives their meanings; instructions and motivation also help in the cognitive development of the learner.
5. Family and Society

2. Teacher

Task #3: Share your thoughts on this:

<https://www.youtube.com/watch?v=1y0JdnVYqZ4>

DUTIES AND RESPONSIBILITIES:

-  Meet and instruct assigned classes designated time and place
-  Maintain classroom environment conducive to learning within limits of source
-  Prepare for classes assigned, show written evidence of preparation
-  Assist students in setting and maintaining standards of classroom behavior
-  Evaluate student progress on a regular basis
-  Maintain accurate, complete, and correct records as required by law
-  Assist in selecting books, equipment

Roles of Teacher in the teaching-Learning Process

❖ **Manager** - As manager, the teacher is responsible for the effective management of her class from the start to the finish. The teacher carries throughout the day systematic activities to develop the pupils' cognitive, psychomotor, and effective aspects of the teaching-learning process. The pupils' eagerness and interest, therefore, to participate in all the learning activities prepared and conducted by the teachers in the classroom is a manifestation of an orderly classroom management by the teacher-manager.

❖ **Leader**. A teacher always assumes the position of a leader and he has to be credible in this regard. A leader directs, coaches, supports, and delegates depending on the needs of the situation. A leader is always looked upon as somebody dependable and responsible. He should, therefore, manifest the highest leadership potentials demanded of his role as teacher and leader. The teacher should set the example to emphasize his role of being a leader. He should also be aware that to be a good leader, he must first be a good follower

❖ **Surrogate Parent**. In the school, the teachers are the parents of the pupils/students. Parents have a feeling of security knowing that their children are in good hands. Added to their main function of developing the pupils intellectually, teachers are also expected to train the pupils socially and emotionally and to look after their physical and mental wellbeing. In school, teachers take over the role of the parents, attending to the needs of the pupils and offering them the comforts away from home. In the process, he guarantees that the individual rights of the pupils to education and safety are respected.

❖ **Counselor.** Every teacher is a guidance teacher. He acts as counselor to the pupils especially when the pupils are beset by problems. In general, teachers comfort and make the pupils feel they have a ready shoulder to cry on. As counselor, the teacher religiously keeps tab of all the activities of the children under his care, carefully noting important information regarding the children's moods, health, and progress in their studies that will help him assess the over-all performance of the learners.

❖ **Model.** A teacher is an exemplar. He serves as model to his pupils. Pupils idolize teachers; they believe the things the teacher says, especially if the teacher is kind, approachable, and sympathetic to their needs. As a model, the teacher must look his best all the time, master his lessons, show his interest in the children's welfare, show good behavior, and show his interest in the children's welfare, show good behavior, and inculcate good work and attitudes, especially during trying moments inside the classroom; be fair in dealing with pupils; and exhibit good judgment when the situation calls for it.

❖ **Public Relations Specialist.** The credibility of the school is attributed most of the time to the ways the teachers deal with people outside the school, like the schools' benefactors, parents of the pupils, church leaders, government employees, and others. The teacher, in his role as a public relations specialist, will be able to solicit important donations in cash or in kind for the development of both the school and the pupils. More than this, the teacher who has good public relations will always make a name for his school.

❖ **Facilitator.** The teacher is the facilitator of learning. The pupils must be given the chance to discuss things under the close supervision and monitoring of the teacher. As a facilitator, the teacher prepares guidelines which will serve as the focus of discussion and activities. The teacher oversees the activities inside the classroom. He allows pupils to discuss spontaneously with only his very minimal affirmation and

confirmation. In the event, however, that some clarifications are needed, he can clarify vague points and correct wrong notions of the pupils.

❖ **Instructor.** The main function of the teacher is instruction. All the other roles aforementioned are corollary to teaching. To effectively carry out this aspect of teaching, the pre-service education of teachers must be more than adequate to prepare them for a job involving varied responsibilities.

Cooperate with other members of staff in planning instructional goals, objectives and methods.

The Teaching Styles

1. The Authority, or lecture style

The authority model is teacher-centered and frequently entails lengthy lecture sessions or one-way presentations. Students are expected to take notes or absorb information.

- **Pros:** This style is acceptable for certain higher-education disciplines and auditorium settings with large groups of students. The pure lecture style is most suitable for subjects like history, which necessitate memorization of key facts, dates, names, etc.
- **Cons:** It's a questionable model for teaching children because there is little or no interaction with the teacher. Plus it can get a little snooze-y. That's why it's a better approach for older, more mature students.

2. The Demonstrator, or coach style

The demonstrator retains the formal authority role by showing students what they need to know. The demonstrator is a lot like the lecturer, but their lessons include multimedia presentations, activities, and demonstrations. (Think: Math. Science. Music.)

- **Pros:** This style gives teachers opportunities to incorporate a variety of formats including lectures and multimedia presentations.

- **Cons:** Although it's well-suited for teaching mathematics, music, physical education, or arts and crafts, it is difficult to accommodate students' individual needs in larger classrooms.

3. The Facilitator, or activity style

Facilitators promote self-learning and help students develop critical thinking skills and retain knowledge that leads to self-actualization.

- **Pros:** This style trains students to ask questions and helps develop skills to find answers and solutions through exploration; it is ideal for teaching science and similar subjects.
- **Cons:** Challenges teacher to interact with students and prompt them toward discovery rather than lecturing facts and testing knowledge through memorization. So it's a bit harder to measure success in tangible terms.

4. The Delegator, or group style

The delegator style is best suited for curricula that require lab activities, such as chemistry and biology, or subjects that warrant peer feedback, like debate and creative writing.

- **Pros:** Guided discovery and inquiry-based learning place the teacher in an observer role that inspires students by working in tandem toward common goals.
- **Cons:** Considered a modern style of teaching, it is sometimes criticized as eroding teacher authority. As a delegator, the teacher acts more as a consultant rather than the traditional authority figure.

5. The Hybrid, or blended style

Hybrid, or blended style, follows an integrated approach to teaching that blends the teacher's personality and interests with students' needs and curriculum-appropriate methods.

- **Pros:** Inclusive! And it enables teachers to tailor their styles to student needs and appropriate subject matter.

- **Cons:** Hybrid style runs the risk of trying to be too many things to all students, prompting teachers to spread themselves too thin and dilute learning.
- ❖ Because teachers have styles that reflect their distinct personalities and curriculum—it's crucial that they remain focused on their teaching objectives and avoid trying to be all things to all students.

3. Learning Environment

- The place where teaching and learning can take place in the most effective and productive manner
- Consists of the physical, psychological environment that surrounds the learner and that influences his/her learning
- Factors and situations that are likely to promote or diminish student's motivation to learn, and how to help students to become self-motivated

Classroom as a Learning Environment

Classroom Environment Encompasses Four Factors namely:

1. Physical Environment - includes the location, size, shape, construction of the room itself; the furniture in the room; instructional supplies or resources for learning; provisions for lighting, heating and ventilating; provisions for sanitation, cleanliness, and orderliness.
2. Intellectual Climate - This refers to patterns of behavior, the interaction pattern, qualities of interaction, and attributes that help the learners think clearly, critically, and creatively. The general atmosphere should be characterized by intellectual activities and pursuits for excellence.
3. Social Climate

Three types of social climate existing in the classroom:

- a. autocratic - the teacher makes all the important decisions, directs all the activities, and evaluates pupil progress in terms of arbitrary standards. There is very little communication between teacher and pupils, hence, the learners find little opportunity in this type of climate for

initiative, participation in group planning, or self-evaluation.

b. laissez-faire - each learner operates as an individual, strives for recognition of his own achievement, and develops little regard for the rights and accomplishments of others. In this climate, the human relationships are in terms of coactions rather than interaction, there is little emphasis in group living.

c. democratic - the goals are established by group participation and plans are made on the basis of cooperative group planning. There is, therefore, a great deal of cooperative teamwork resulting from a wide circle of communication. The role of the teacher in this kind of climate is neither that of dictator nor of an interested spectator but that of a mature person

4. Emotional Climate - this pertains to the emotional adjustment and mental health of the children. To foster the right kind of emotional climate, the teacher must see that the personality needs of the learner are met in the classroom. The learner needs to feel secure in his group. He must have opportunities to make decisions and become increasingly self-directing. It is only the effective teacher who can provide these opportunities.

❖ **Home as a Learning Environment**

- Home provides an instructional process that includes acquisition of behavioral patterns, acceptance of standard norms and development of necessary traits.
- It is from home that a child gets instructions on the specific ways of doing things.
- Home is where the learners first cultivate trust, attitude and skills that will aid them as they embrace the world enthusiastically. It is the cornerstone of every young child- a place of nurture to help achieve one's fullness.
- The quality of parent-child relationship is fundamental to children's longer-term development.

❖ **Community as Learning Environment**

- Refers to the social context of learners and their surroundings.

- It has influential qualities that shape learning and has the power to lead its members in their pursuit of excellence performance.
- Community brings about a learning environment that allows opportunities for interaction among its member.

Task 5: What are the conditions at your home and in the school that disrupt your learning?

Your answer:_____.

IV. Assessment: Activity/ Quiz.
